

Oil Galley Plug Adapter for Subaru EJ Engines

This adapter will allow you to install an aftermarket Oil Pressure or Oil Temperature gauge sending unit directly into the oil galley of the engine.

1. Locate and remove the factory oil galley plug located behind the throttle linkage on the left side of the turbo using an 8mm Allen key.
2. Thread the adapter into the engine making sure not to lose the crush washer and tighten with a 17mm socket.
3. Thread your sensor into the adapter and tighten with the appropriate wrench for your sensor. Be sure to use Teflon tape on the sensor threads.
 - Due to the space restrictions on the oil galley port, a remote line kit may be needed in order to relocate the sensor to a more open area.
 - Connect the sensor signal wire to the gauge as per the instructions that are included with your gauge, and secure any loose wire with wire ties.
