

Pillar Gauge Pod for 2005-2010 Chevy Cobalt

1. **⚠ WARNING:** Prior to installing this pillar pod, make sure your vehicle does not have side curtain airbags.
2. This pillar pod is a complete replacement and will require removal of the factory A-pillar trim. Be sure to store the factory A-pillar trim in a safe location when done.
 - Partially remove the weather stripping surrounding the factory A-Pillar.
 - Remove the factory A-pillar trim by removing the bolt cover using a flathead screwdriver; use a 7mm to remove the bolt.
3. Mark and drill a hole in the pillar pod using a 1/8" drill bit following the steps below.
 - Place Painter's Tape over the pod in order to mark and drill the hole without damaging the pod.
 - Measure 1 7/8" down from the upper left side next to where the weather strip would be located and then 2 7/16" across.
4. **➤ OPTIONAL STEP:** Our pillar pods can be painted using ABS plastic paint. Be sure to scuff the surface of the pod using a scuff pad. This will allow the paint to properly adhere to the surface of the pod. Before applying paint to the pillar pod, ensure it is cleaned off and that there is no residue on the pod from scuffing it. Apply 2-3 even coats, waiting 10 minutes between coats to dry.
 - Be sure to follow the paint manufacturer's instructions while painting, as well as proper safety procedures.
 - Be advised, you will not be eligible to return this pod for a refund if painted.
5. Connect the 2 1/16" [52mm] gauge wires to their sensors and power by following the instructions that are included with the gauges.
6. Install the pillar pod to the factory A-pillar support using the included screw. This screw installs through the drilled hole on the pod.
 - To ensure a proper fit, thread the included screw into the vehicle A-Pillar support, but do not completely tighten it. Reinstall the weather strip and adjust the pillar pod so that it lines up properly to the windshield. Once aligned, tighten the screw using a Phillip's-Head Screwdriver.
