

Pillar Gauge Pod for 2011-2018 Jeep Wrangler JK

- ⚠ WARNING :** Prior to installing this pillar pod, make sure your vehicle does not have side curtain airbags.
- This pillar pod is a complete replacement and will require removal of the factory A-pillar trim. Be sure to store the factory A-pillar trim in a safe location when done.
 - Using a T20 Torx Driver, remove the two screws holding up the sun visor and set the sun visor off to the side.
 - Using a Phillip-Head Screwdriver, remove the push-in retainer in the lower A-pillar hole.
 - Remove the A-pillar corner trim by releasing the push-in retainer.
 - Unplug the electrical connector if equipped and set the corner trim off to the side.
 - Pull on the factory A-pillar trim to release the spring clip and remove from the vehicle.
- Mock your pillar pod up to your vehicle's factory A-pillar corner trim, aligning the cutout on the pillar pod with the molded hole on the back side of the stock corner trim.
- Once aligned, mark and drill two 7/32nd holes through both pieces.
 - **OPTIONAL STEP :** Our pillar pods can be painted using ABS plastic paint. Be sure to scuff the surface of the pod using a scuff pad. This will allow the paint to properly adhere to the surface of the pod. Before applying paint to the pillar pod, ensure it is cleaned off and that there is no residue on the pod from scuffing it. Apply 2-3 even coats, waiting 10 minutes between coats to dry.
 - Be sure to follow the paint manufacturer's instructions while painting, as well as proper safety procedures.
 - Be advised, you will not be eligible to return this pod for a refund if painted.
- Push in the two included Flush-Mounted Retainers into the drill holes (as indicated by the arrow in the photograph) to secure both pods together.
- Connect the 2 1/16" [52mm] gauge wires to their sensors and power by following the instructions that are included with the gauges.
- In the event you have to remove the pillar pod from the factory trim, carefully remove the fasteners using a panel pop tool.
- Plug in the factory electrical connector, if it was equipped, and install your vehicle's factory A-pillar corner trim and pillar pod assembly back into your vehicle with the factory push-in retainer.
- Reinstall the sun visor using a T20 Torx Driver.
- Finally reinstall the factory push-in retainer in the lower A-pillar hole.
