

## Transmission Test Port Extender for Dodge Ram

1. Using Teflon tape, wrap the 1/8<sup>th</sup> NPT temperature sensor thread to prevent any transmission fluid leaks.  
**Note:** Be sure to wrap the Teflon tape in the same direction as you would thread the sensor into the test port extender.
2. Using Teflon tape, wrap the male end of the 1/8<sup>th</sup> NPT test port extender to prevent any transmission fluid leaks.  
**Note:** Be sure to wrap the Teflon tape in the same direction as you would thread the extender into the test port.
3. Thread the 1/8<sup>th</sup> NPT temperature sensor into the female end of the test port extender and tighten using a 14mm and 17mm wrench.
4. Remove the bolt that plugs into the transmission test port using an 11mm wrench. This will be the middle bolt on the passenger's side.
5. Thread the test port extender with the sensor installed into the transmission test port.
6. Tighten both the test port extender and sensor using a 17mm wrench.
7. After the test port extender and temperature sensor are installed, be sure to check for leaks.

Fits the following Transmissions:

- 36RH/37RH Automatic 3 Speed Transmission – 86-93 Trucks
- 47RH Automatic 4 Speed Transmission – 94-95 Trucks
- 47RE Automatic 4 Speed Transmission – 96-02 Trucks
- 48RE Automatic 4 Speed Transmission – 03-07 Trucks
- **Does Not** Fit the 07 + 68RFE Automatic Transmission
